*Flotronic 'One - Nut' pumps - The simplest ideas are often the best*

## Flotronic Drum/Barrel Unloading System

The Flotronic Unloading System combines our unique 'ONE-NUT' pump with our barrel unloading skid.

The 'ONE-NUT' sanitary style pump based on our 3A and EHEDG design, has already proven itself in the hygienic/sanitary industries.

### High Viscosities:

- Combining the High Flow Slimline Style 'ONE-NUT' pump with our barrel emptying system, enables you to now pump highly viscous materials out of your barrel at increased flow rates.

### Cleaning:

- System can be cleaned in place using the pump itself or an external CIP rig. Alternatively, because of the 'ONE-NUT' design of the pump, it can be easily stripped down for cleaning.

### Less Waste:

- Minimal wastage is achieved with our inflatable seal which ensures the minimum of product is retained in the barrel.
- Less product hold up than other systems.

### Inflatable Seal:

- The seal inflates to give an excellent seal while moving down the barrel; then deflating to enable easy removal from the barrel.

### Bespoke Systems: Made to Customer's Requirements

- Systems to cater for any fibre, metal or plastic 200 litre/55 gallon drum or similar.
- The barrel unloading skid can be fully mobile or fixed in place.
- Barrel unloading system to suit the end user's needs, including roller systems if required.
