## Hydraulic-Pump

## Height adjustment by hydraulic pump a clever alternative not only for beds

With the new Bansbach hydraulic pump, the height of a great variety of applications can be adjusted by simply pumping. The pump can be completely operated without external energy supply. The movement is effected by simply pumping. Due to the weight of the application, the reset is always controlled and can be effected by opening the valve.

The known charachteristics of the Bansbach gas springs apply of course for this Bansbach product, too.

We offer here also a very flexible product range which will be adapted to the characteristics of your application and therefore optimally fulfills your requirements.

## Please contact us!

## Product characteristics:

- Maintenance-free
- Completely independent of external energy supply
- Extension forces up to 10 kN
- Strokes from 80-400 mm possible
- Operating temperature: $+10^{\circ} \mathrm{C}-+40^{\circ} \mathrm{C}$
- Overload protection
